

Banish

PHOSPHATE REMOVER

Focus Banish Phosphate Remover is used for the elimination of phosphate from swimming pool water. Phosphates in pool water are a food source for algae and will assist in its reproduction.

DESCRIPTION

A clear coloured liquid.

ACTIVE CONSTITUENT

Dicarboxylic Acid Complex

PRODUCT BENEFITS

Eliminates phosphate from pool water thereby removing a food source for algae.

Quick and effective.

Short downtime for swimmers.

NOTES

Test the level of phosphate in the pool water by using the Focus Phosphate Test Kit. Remember to check the colour in the vial against the test sheet and not the dipstick. Add 1 litre of Phosphate Remover into 10 litres of water. Set filter to recirculate. With filter operating, add solution slowly through the skimmer box and circulate for two hours before allowing swimmers to re-enter the water. Return filter valve to normal operation. Phosphates will be removed by filtration, monitor filter pressure and clean or backwash as necessary. Add 250ml monthly as a maintenance dose
