

# Blackspot Granular

## ALGAE REMOVER

Focus Granular Blackspot treatment designed to clear up even the worst case of blackspot from the surface of white plaster, tiled and pebblecrete pools. Easy to use and incredibly strong the granules are directly sprinkled onto the affected area, not only killing the Blackspot you can see but killing the root deep down in the wall to help prevent a recurrence.

### DESCRIPTION

White granules

### ACTIVE CONSTITUENT

900g/kg Trichloroisocyanuric Acid

### PRODUCT BENEFITS

Eliminates blackspot easily and quickly including the root system.

Easy to use.

Slow dissolving is more effective.

### NOTES

Eliminating severe blackspot algae in white, tiled and pebblecrete pools only.

Turn off the filtration system. Sprinkle Blackspot Granular algaecide directly over the affected areas. Leave to sit. Product is slow dissolving and will destroy the algae including the root system. When the algae has gone, resume normal filtration and backwash if necessary.

DO NOT use on bleachable surfaces.
